VTCSOM has purpose-built facilities to support its medical educational program, and is co-located with significant research and clinical facilities, all on the medical campus. The SOM building is specifically designed around the Patient Centered Learning curriculum. VTCSOM students have a truly dedicated learning environment that includes two lecture halls, specially-equipped symposium rooms, a medical library with study space and small conference rooms, 12 dedicated team rooms with individual storage and study space, a media center, a student lounge, a student recreation and wellness space, and ten OSCE rooms to support the clinical education program. VTCSOM shares the state-of-the-art Virginia Intercollegiate Anatomy Laboratory at the Jefferson College of Health Sciences. The VTC Research Institute is located in the same building and adds to the availability of research laboratories available to VTCSOM students.
